

Uturn Data Solutions attains AWS Well-Architected Framework Partner status - Launches free Well Architected Review offering with access to AWS Usage Credits

Chicago, Illinois – July 26, 2018: Uturn Data Solutions, a Chicago-based Advanced Consulting Partner in the Amazon Web Services Partner Network (APN), is now a part of the AWS Well-Architected Framework. Uturn’s team of Certified AWS Architects have been trained to perform well architected reviews and remediate customers’ architecture in order to follow AWS best practices. The AWS Well-Architected Framework was developed to help AWS users build some of the most secure, high-performing, resilient, and efficient infrastructure for their applications.

The AWS Well-Architected Framework consists of 5 Pillars: Security, Reliability, Cost Optimization, Performance Efficiency, and Operational Excellence. The goal of a review is to identify any critical issues immediately and prioritize additional items that can improve performance across each pillar over time. By completing a review and remediating aspects that are not optimally designed, the customer is on the their way to being AWS Well-Architected, with a baseline and plan to measure progress going forward. AWS Well-Architected Framework Partners must demonstrate a track record of providing guidance on how to design to and implement AWS best practices.

“The AWS Well-Architected Framework is a natural fit for Uturn,” said Adam Dillman, Uturn’s Founder and Managing Partner. “Since our early days as a Consulting Partner in the AWS Partner Network, Uturn has architected solutions for our clients with AWS best practices in mind. Admission into the program highlights Uturn’s commitment to helping organizations adhere to AWS best practices and allows us to programmatically measure our clients’ progress as more and more critical workloads move to AWS.”

Uturn Data Solutions has grown quickly through this approach by architecting and building solutions on AWS for both commercial and public sector clients. This latest achievement adds to Uturn’s existing accolades on AWS, which include: being named an Advanced Consulting Partner in the AWS Partner Network (APN), having achieved AWS Service Delivery status for Amazon Redshift and AWS Lambda, being part of the AWS Authorized Government Reseller Program, having a solution listed on AWS Marketplace, and being part of the AWS Public Sector Partner Program.

“The Well Architected Framework provides a repeatable and consistent approach to building and operating workloads on AWS.” continued Mr. Dillman. “It gives early AWS users the confidence to move critical workloads to AWS; for mature AWS users the review is an objective lens in which to measure their environment against thousands of successful AWS implementations.”

For a limited time, Uturn is offering a [free AWS Well-Architected Framework Review](#) along with AWS usage credits.

About Uturn Data Solutions

Uturn Data Solutions is a Chicago-based company at the nexus of data strategy and cloud computing. We provide advisory and technology services to transform data assets into real business value.
